### **EXAMINER'S COMMENT**

1. The corrected drawings filed 26 July 2004 include hand drawn matter in Figures 2 and 8. No other corrected or replacement drawings have been filed. It is unclear whether these drawings are meant to be formal replacement drawings or just drawings showing corrections. Please file formal drawings.

### **Reasons for Allowance**

2. The following is an examiner's statement of reasons for allowance: As is argued in the Appeal Brief, the prior art searched and found has not taught the claim limitations "one of the unique resources is a bank number to indicate how many times the head pointer has wrapped around the tail pointer in order to maintain an order of the resources for the at least one thread (Claim 1)", "a bank number to indicate how many times the head pointer has wrapped around the tail pointer in order to maintain an order of the resources for the at least one thread (Claim 6)", "incrementing a bank number if the first entry passes a last entry of the particular thread before it finds the free entry (Claim 7)", "wherein a bank number records the number of times a first entry of one thread wraps around a last entry of the same thread to access an available entry for allocating resources of the one thread (Claim 10)", "means to indicate the number of times the first entry of the one thread wraps around the last entry of the same thread (Claim 11)", and "the number of times the head pointer wraps around the tail pointer is recorded (Claim 13)." Specifically, the prior art has taught allocating entries in queues specific to individual threads and the queues having head and tail pointers, but the prior art has not taught counting the number of times the head pointer wraps around the tail pointer, e.g. the number of times an entry wraps around the last entry.
